

ProtectIQ: Smarter, Always-On Security for Connected Homes

ProtectIQ is a cloud-based cybersecurity CVCTX SmartHome solution that protects entire home networks at the gateway level, rather than relying on security software installed on individual devices. It continuously monitors network activity, blocks malware, viruses, ransomware, and malicious websites, and prevents unauthorized access before threats can reach connected devices. With real-time alerts and visibility through the CommandIQ app, ProtectIQ helps ensure every device on the network—from smartphones to smart home systems—remains secure.

How **ProtectIQ** Works

- Blocks malware, viruses, ransomware, and malicious websites before they reach connected devices.
- Monitors network traffic 24/7 using a cloud-based threat intelligence database that is continuously updated with new threat signatures.
- Prevents unauthorized network access by detecting and blocking suspicious intrusion attempts and unknown devices.
- Provides real-time alerts and security reports through the CommandIQ app so subscribers can see threats that have been blocked.

Why Use **ProtectIQ**?

- Protects all connected devices—including computers, smartphones, gaming consoles, smart TVs, cameras, and IoT (Internet of Things) devices—with a single security solution.
- Reduces the risk of malware infections, ransomware attacks, phishing attempts, and privacy breaches.
- Delivers peace of mind through proactive monitoring and threat notifications.

By blocking cyber threats before they reach devices and providing visibility through the **CommandIQ** app, ProtectIQ helps **Colorado Valley Communications** deliver a safer, more secure connected-home experience. So, whether you're connected at home or using a provider-managed hotspot around town, ProtectIQ helps keep your devices safer by stopping cyber threats before they reach your network.

Enhance your home network security today with ProtectIQ. Contact us today to learn how you can activate this powerful, always-on protection and safeguard every connected device in your home.
